Education

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

Bhopal, Madhya Pradesh

2023 - 2027

Certifications

Google Data Analytics Professional Certificate — Coursera

Google IT Support Professional Certificate — Coursera

SQL for Data Science — Coursera

Projects

Smart Job Market Analytics | *Python, Pandas, SQL, Power BI, Matplotlib*

December 2025

- Built an end-to-end **data analytics pipeline** to analyze job market trends across roles, skills, and locations using real-world job posting datasets.
- Performed **data cleaning and preprocessing** using Python and Pandas, handling missing values, duplicates, and inconsistent formatting across large datasets.
- Applied **SQL queries** to extract, aggregate, and analyze in-demand skills, salary trends, and hiring patterns across industries.
- Designed **interactive Power BI dashboards** and Matplotlib visualizations to present job market insights including skill demand and salary distribution.
- Delivered actionable insights on **high-demand skills and roles**, supporting data-driven career and hiring decisions.

Ghost Kitchen App | *Full-Stack, React, Node.js, Express.js, MySQL, REST APIs*

July 2026

- Converted the **Ghost Kitchen Optimizer** into a full-stack web app that recommends the **best locations to open a cloud kitchen** based on budget, city, area, and cuisine preferences.
- Built a **RESTful backend** using Node.js and Express.js to compute and serve location recommendations with metrics like setup cost, budget left, demand, and competition.
- Designed a **MySQL database** to store city/area-wise cuisine demand, competition, and cost data, powering real-time recommendation queries.
- Developed a **React dashboard** with dynamic filters (budget, city, area, cuisine) displaying ranked recommendations with a "Highly Recommended / Recommended" verdict system.
- Integrated an **AI Analyst module** and analytics section for deeper location insights, along with role-based access (Admin panel) and search functionality.

Campus Mess Demand Predictor | *React, Node.js, Express.js, PostgreSQL, Python, Redis*

July 2026 – Present

- Building a **full-stack pre-ordering and demand forecasting system** to reduce food waste and wait times in college mess/canteen operations.
- Developing a **forecasting model** in Python using historical order data, day-of-week patterns, and exam-period trends to predict meal-wise demand in advance.
- Designing a **pre-order and reservation system** allowing students to book meals ahead, with real-time order counts tracked via Redis.
- Building a **Node.js/Express REST API** backed by PostgreSQL to manage orders, meal schedules, and demand analytics.
- Developing a **React dashboard** for mess staff to view predicted demand, live order volumes, and reduce over/under-preparation of food.

Technical Skills

Programming Languages: Java, Python

Web Technologies: HTML, CSS, JavaScript

Database: MySQL

Data Analytics: Excel, Pandas, Power BI, SQL

Core Subjects: Data Structures and Algorithms, OOPs, DBMS

Tools: Git, GitHub, VS Code
