Education

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

Bhopal, Madhya Pradesh

2023 – 2027

CGPA: 8.63/10

Certifications

Google IT Support Professional Certificate — Coursera

Google Data Analytics Professional Certificate — Coursera

Responsive Web Design — freeCodeCamp

Projects

Cloud Kitchen Location Intelligence Dashboard | *Power BI, DAX, Power Query, Python, Excel* **July 2026**

- Built a **multi-city Power BI dashboard** analyzing 3,000+ data points across 5 cities, 25 areas, and 10 cuisines to identify optimal cloud kitchen locations.
- Generated and structured the underlying dataset using **Python and Pandas**, modeling realistic correlations between demand, competition, and cost.
- Engineered **custom DAX measures** including a weighted Recommendation Score, Budget Efficiency Ratio, and Market Saturation Index to rank areas by opportunity.
- Built a **relational data model** with a dedicated Date table to enable time-intelligence analysis of monthly demand trends.
- Designed **ranked analytical tables and visuals** to surface high-opportunity, low-competition locations for cloud kitchen expansion.

Ghost Kitchen App | *Full-Stack, React, Node.js, Express.js, MySQL, REST APIs* **July 2026**

- Converted the **Ghost Kitchen Dashboard** into a full-stack web app that recommends the **best locations to open a cloud kitchen** based on budget, city, area, and cuisine preferences.
- Built a **RESTful backend** using Node.js and Express.js to compute and serve location recommendations with metrics like setup cost, budget left, demand, and competition.
- Designed a **MySQL database** to store city/area-wise cuisine demand, competition, and cost data, powering real-time recommendation queries.
- Developed a **React dashboard** with dynamic filters (budget, city, area, cuisine) displaying ranked recommendations with a "Highly Recommended / Recommended" verdict system.
- Integrated an **AI Analyst module** and analytics section for deeper location insights, along with role-based access (Admin panel) and search functionality.

Campus Mess Demand Predictor | *React, Node.js, Express.js, Prisma, PostgreSQL, Redis, JWT* **July 2026 – Present**

- Building a **full-stack pre-ordering and demand forecasting system** to reduce food waste and wait times in college mess/canteen operations.
- Developing a **forecasting model** in Python, served via a **FastAPI microservice**, using historical order data, day-of-week patterns, and exam-period trends to predict meal-wise demand in advance.
- Designing a **pre-order and reservation system** with **JWT-based authentication**, allowing students to securely book meals ahead, with real-time order counts tracked via Redis.
- Building a **Node.js/Express REST API** using **Prisma ORM** with PostgreSQL to manage orders, meal schedules, and demand analytics.
- Developing a **React dashboard** for mess staff to view predicted demand, live order volumes, and reduce over/under-preparation of food.

Technical Skills

Languages: Java, Python, SQL, JavaScript, HTML, CSS

Technologies: React.js, Node.js, PostgreSQL, MySQL

Data Analytics: Excel, Pandas, Power BI, Matplotlib

Core Competencies: Data Structures and Algorithms, OOPs, DBMS

Tools: Git, GitHub Actions
